

Security Health Assessment

Detect, reduce and manage areas in your information systems that present a risk to your business operations.

A CyberCX security health assessment by a team of cyber security experts can help your organisation to understand its vulnerabilities and provide recommendations on how to minimise your cyber risk and help to prevent costly cyber-attacks.

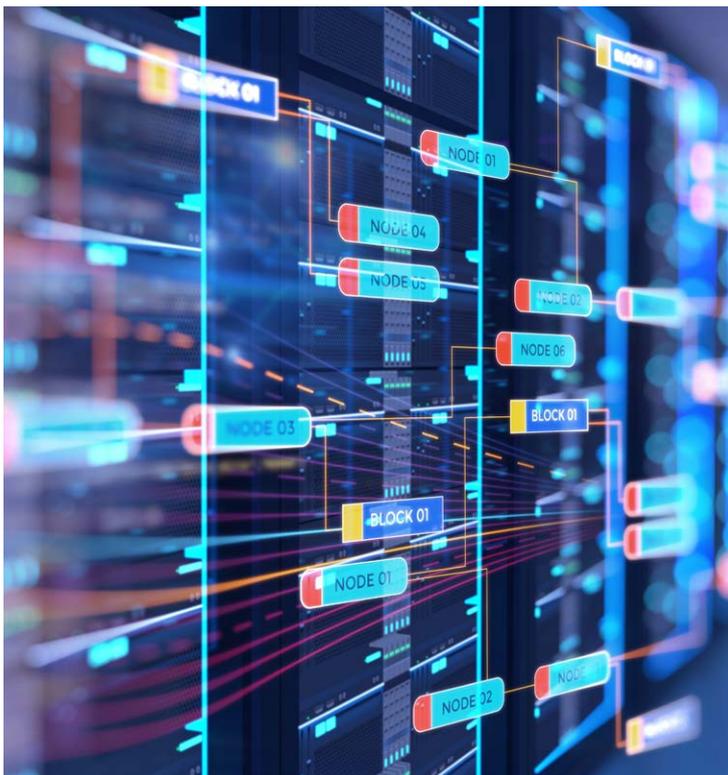

Ideal for

Any organisation wishing to identify risks to their business operations and implement a robust cyber security program.

How we deliver

In person onsite, and remote.

Organisational Benefits:

Security overview

Provides a reliable overview of your key cyber security risks and maturity and alerts you to anything that needs immediate attention.

Assessments of devices

A full assessment of your devices, infrastructure, payment security and business applications.

Recommendations

Provides a security maturity rating and cyber security recommendation roadmap to implement based on risk.

Why a Security Health Assessment with CyberCX?

Our Security Health Assessment provides a structured assessment of key risk areas across your business in-line with ISO 27001, NIST or other standards. We will design a bespoke assessment program based on your requirements but typically our assessments include:

- ▶ External, internal, wireless and physical penetration tests
- ▶ Server configuration reviews and password audits
- ▶ Assessment of business continuity capabilities, including incident management plans and your ability to shift work to alternate locations
- ▶ Technology resilience (IT Disaster Recovery)
- ▶ Policy and procedure gap analysis against the ISO 27001 standard or other standards as required.

The outcome of this assessment will provide your organisation with a report which gives an overall risk and security maturity rating along with full details of what remedial action is needed.

Information security experts you can rely on.

- ▶ We have a specialist team of experts with extensive experience of delivering cyber security management projects across the globe.
- ▶ Protecting and defending more than 2,000 companies worldwide.
- ▶ Our flexible approach ensures the entire process is tailored to suit your specific circumstances, so your organisational goals are achieved.
- ▶ Extensive track record testing thousands of networks, systems and applications across all sectors.
