

# Supplier Security Assessments

Identify, reduce and manage the security risks posed by your suppliers

Organisations need to be confident that their suppliers have adequate security controls in place to protect the confidentiality, integrity and availability of their customer and organisation's data and services.

## Ideal for

Any organisation wishing to reduce and manage the security risks posed by their suppliers.

## How we deliver

In person onsite, and remote.

## Why Supplier Security Assessments with CyberCX?

If one of your suppliers were to suffer a data breach, critical technology failure or were not able to perform a critical process it could cause significant financial and reputational damage to your organisation.

Organisations need to be confident that their third-party suppliers have adequate security and resiliency controls in place to protect their customer and organisational data and service provision.

CyberCX's proactive supplier resiliency program (SRP) will help you to identify, reduce and manage the security risks posed by your suppliers to the confidentiality, integrity and availability of your organisation's data and services.

## Organisational benefits:

### Improve your security posture

Conducting supplier security assessments and validation will enable effective information security risk management and improve your overall cyber security posture.

### Evaluation against international standards

Your key suppliers' security processes and capabilities will be evaluated against international standards, including ISO 27001 and ISO 22301, NIST, HIPAA, GDPR.

### Maintaining trust and reputation

Enhance your organisation's reputation by giving customers and business partners confidence that have mature information security practices and have in place robust systems and procedures to safeguard sensitive data.

### Ensuring availability of critical services

Assess Business continuity, incident response and disaster recovery of suppliers to ensure they can continuously provide the critical services they provide.

We can support you with one-off supplier assessments, and/or manage an annual supplier assessments and validation reviews or develop a comprehensive supplier resiliency program for you.

We will identify if your suppliers have adequate security and resiliency controls and help you to work with those suppliers to ensure they comply with your contracts and/or service level agreements and the business relationship continues. We validate against completed supplier security questionnaires.

CyberCX can design a bespoke supplier resiliency program based on your requirements but typically our supplier assessments include:

- ▶ External, internal, wireless and physical penetration tests.
- ▶ Server configuration reviews and password audits.
- ▶ Assessment of the supplier's business continuity capabilities, including incident management plans and their ability to shift work to alternate locations.
- ▶ Disaster recovery capability assessment and IT testing.
- ▶ Policy and procedure gap analysis against the ISO 27001 NIST or other standards.
- ▶ Assessment of the supplier's data processing activities against DPA 2018 and GDPR.

## Security experts you can rely on

- ▶ Our experienced information security experts have completed a wide-range of supplier resiliency programs for clients around the world, using our established framework.
- ▶ Our experts will assess and validate the effectiveness of the controls they have in place to give you a clear overall picture of your third-party supplier's risk profile, posture and maturity.
- ▶ We'll assess the strength of the security controls your suppliers have in place to ensure your organisation is adequately protected and prepared.
