

# Azure Security Review

Safeguard your organisation with the best practice security controls across your Azure cloud infrastructure.

When using Azure, a security configuration review is vital if you want to mitigate security threats caused by misconfigurations.

## Ideal for

Any organisation that uses an Azure environment.

## How we deliver

In person onsite, and remote.

## Why an Azure Review with CyberCX?

Our qualified professionals will conduct a comprehensive configuration review to assess all aspects of your Azure environment and identify any threats or areas for improvement.

The review will detail current capabilities and recommendations to improve security.

Areas covered in the review include:

- ▶ Attack surface mapping.
- ▶ Identity and access management, including user authentication.
- ▶ Role-based access control for standard and privileged users.
- ▶ Logging and auditing to facilitate incident response and to detect malicious activity.
- ▶ Configuration of web service policies, groups and users.
- ▶ Backups, redundancy and disaster recovery.

## Organisational benefits:

### Enhanced security and compliance:

An Azure security review will ensure your organisation data exposure is significantly reduced and your ability to maintain legal and regulatory compliance is maintained or enhanced.

**Trust and Reputation:** Enhance your organisation's reputation by giving customers and business partners confidence that you implement Cyber Security first and have in place robust systems and procedures to safeguard sensitive data.

**Peace of mind:** You will gain peace of mind that your Azure environment is safe and secure across your entire organisation.

**Business Resiliency:** A strong Azure security review will enable your organisation to build cyber resiliency to prevent breaches from occurring – or at the very least limit the severity of the breach and minimize the impact.

Configurations will be collected through a combination of interviews, and information-gathering scripts and independent access Azure console and command line interface.

Our Azure experts can assist in identifying vulnerabilities caused by misconfigurations, bad practices and systems that are vulnerable to Azure-based vulnerabilities. These services allow you to remediate any security vulnerabilities before attackers can exploit them.

An Azure Configuration Review is recommended in tandem with an Office 365 Review for the best coverage.

As with all cyber protection, an Azure Cloud Security Review should form part of your organisation's ongoing security programme to mitigate existing and emerging threats. We'll work with you to identify and remedy weaknesses in your cloud security before a malicious party exploits them.

## Experts you can rely on:

- ▶ We understand that no two companies are the same, and our dedicated team will work closely with you to identify the risks and vulnerabilities unique to your business.
- ▶ A qualified team of Azure security specialists who offer world class configuration and license reviews.
- ▶ Benefit from comprehensive reporting and an unparalleled level of transparency and communication.
- ▶ Protecting and defending more than 2,000 companies worldwide.
- ▶ Extensive track record testing thousands of networks, systems and applications across all sectors.

## About CyberCX

CyberCX is a leading independent cyber security services company with offices across the UK, US and Australia, unifying the most trusted cyber security brands and the experts who built them. CyberCX delivers end-to-end cyber security services and the best cyber security talent with the most comprehensive range of cyber security services to business, enterprise and government.

Contact us to find out how CyberCX can help you to assess all aspects of your Azure environment and reduce your security risks.
